

You are Team Astraea

Astraea is the ancient Greek goddess of Justice.

Your team will investigate the UK Police data set describing all crimes reported in England, Wales, and Northern Ireland in the year 2018, as downloaded at the start of February 2019.

We have included data recording the initial report of the crime and the eventual outcome of the case. Separately we have included records of all the people who the police stopped and searched in the period.

The meanings of the columns is described here:
<https://data.police.uk/about/#columns>

Questions you could investigate:

- How long does it take to solve different kinds of crimes?
- Do any types of crime anti-correlate geographically?
- Are some police forces better at solving particular types of crime?
- What geographic factors affect crime?
- What crimes does stop-and-search correlate with?
